

## OsmoMATE<sup>Cryo</sup>

The **first osmometer** conceived, designed, developed and meticulously **manufactured in India by Wheecon** with a track record of 30 years in manufacturing activity

- Based on THIRTY THREE YEARS of experience of Wheecon in handling osmometers, you can trust and count on.
- Osmolality is no longer an esoteric or mystical test, but with low acquisition and running cost is now a common test for critical diagnosis and research.
- Greatest economy of operation and maintenance, thanks to local manufacturing, employing the **highest quality** components of international standard, and no compromise!
- No longer a machine at referral labs alone, but a referral machine at small, mid level and speciality group practice labs, as well as in colleges of higher learning and research facilities.
- Even smaller labs can provide big help in accurate diagnosis with (i) calculated vs measured (ii) serum vs urine osmolality and extended capabilities.
- Myriad of options+ to acquire and use, outright, reagent linkage, reagent rental, hire purchase. So even a limited number of samples, is no longer a limitation for osmolality study any longer !
- Routine consumables, and spares including sample cup, thermistor probe, cooling devices and including replacement parts at an affordable cost, during the life cycle of the machine at a much lower financial outlay compared what is spent now.
- Several features are not available in the comparable osmometers in the market and yet the cost of the osmometer will surprise with sensible automation and affordable.
- No longer the manual raising and lowering of the probe, but at the push of a button , with smooth and automated motorised movement, offered as an option !
- The sample cup in place positioned correctly, automatically initiates measuring process after a delay as a part of the programme and offering higher level of convenience
